The EB-300 exhaust bender is a powerful machine that comes with standard radius tooling for up to 3" OD. This machine is a compression exhaust pipe bender as it uses one large hydraulic ram to push the inside radius die into the compression assisted outside counter dies. The outside dies have two hydraulic cylinders that applies pressure at the point of bend on the inside radius die. The end result is that the machine can bend light gauge tubing without folding the material in half. The EB-300 also comes with an end former with tooling to expand, flare, and swage the tubing. It also allows the operator to create ball joints and flanges.
